EDUCATION

Stanford University

B.S. & M.S. in Computer Science, HCI Track

Expected Jun. 2027

GPA: 3.8

WORK EXPERIENCE

Associate Software Developer Intern (On-Device Abuse Protection)

Google

Jun. 2025 – Sep. 2025

Sunnyvale, CA

- Streamlined abuse protection deployment from 2+ commits to 1, accelerating rollouts for 20+ clients
- Built "Deploy and Bundle" interface, enabling clients to instantly select and launch automated workflows
- Automated client role management, propagating updates from commit to storage in under 50 seconds

UberSTAR Software Development Intern (Matching Intent)

Uber

Jun. 2024 – Sep. 2024

San Francisco, CA

- Implemented cross-sell popup between UberX and Uber Wait & Save during periods of high demand
- Extended upsell framework with 7 configurable flags to handle cross-sell triggers
- Shipped opt-in modal, reducing rider churn during driver-rider matching delays

PROJECTS

Stanford Root | Next.js, TypeScript, Tailwind CSS, Supabase

Jan. 2026 – Present

- Built course discovery platform with multi-filter search, GER tracking, and cross-device schedule sync
- Developed custom data pipeline using Puppeteer and Cheerio to ingest and structure years of unstructured course evaluation data into a high-performance Supabase schema
- Optimized system latency through multi-layer caching and two-phase data loading, achieving sub-200ms repeat load times for a catalog of 10,000+ courses
- Adopted by 40+ Stanford students within two weeks of launch through organic word-of-mouth

MonkeyHouse | Next.js, TypeScript, Tailwind CSS, Firebase, OpenAI API

Apr. 2025 – Jun. 2025

- Built intern roommate matching web app that pairs users based on survey-driven compatibility
- Designed recommendation engine with weighted scoring and OpenAI-driven free-text parsing to detect preference conflicts and optimally rank matches

ScentSync | Next.js, TypeScript, Tailwind CSS, MongoDB, OpenAI API

Jan. 2025 – Mar. 2025

- Built recommendation engine generating personalized, eco-friendly routines from 1,000+ EWG health and beauty products based on user preferences
- Engineered web scraping module to collect and structure product data from the EWG database

PropaGONE | React, Python, JavaScript, Claude API

Apr. 2024 – Jun. 2024

- Developed Chrome extension integrating Claude that detects and explains propaganda and manipulative language in online news articles in real time
- Designed user feedback integration via thumbs up/down signaling to fine-tune model responses and improve detection accuracy over time

SKILLS AND INTERESTS

Languages: Java, Python, Go, C, C++, HTML, CSS, JavaScript, TypeScript

Technologies: GitHub, Git, Next.js, MongoDB, Firebase, Supabase, React Native

Interests: Spanish (B2), investing, poker, weightlifting, bouldering, surfing, chess, espresso
